APPROVALS

ETL safety listing report 3061144A. Conforms to UL STD 1598. Certified to CSA STD C22.2 no. 250.0.

WARRANTY

All covered components have a limited warranty for five years in residential applications, one year in non-residential applications.

Lamps, pleated filters and the PureAir™ Insert are routine maintenance items and are not covered under the warranty.

Refer to the Limited Warranty certificate included with the unit for additional details.

OPERATION

Return air first passes through the MERV 16 Precision Pleat™ media filter. The filter removes more than 95% of the particles and bioaerosols (dander, pollen, bacteria, molds, spores, etc.) as they flow through the PCO.

The filtered air then passes through the UVA lamps and the PureAir™ Insert. The UVA lamps activate the catalyst on the PureAir™ Insert that captures and destroys odors and chemical vapors as they flow through the system.

The adsorbed pollutants (accumulated gases, liquids, or solids) on the surface of the catalyst are oxidized to carbon dioxide and water.

Rather than just absorbing gaseous pollutants (as in carbon systems), PCO provides a reduction of absolute toxicity. Contaminants are destroyed rather than transferred.

The PureAir™ Insert is self-cleaning with respect to the organic material adsorbed on the catalyst surface.

No toxic chemicals are used in the PCO.

FEATURES

APPLICATIONS

The PureAir™ Air Purification System combines multiple air purification technologies into a single, state-of-the-art, air purifier.

The system's primary function is to improve the indoor air quality by:

- Filtration - The MERV 16 Precision Pleat media filter captures more than 95% of particles 0.3 microns and larger and more than 90% of particles 0.01 microns and larger.
- Photocatalytic Oxidation - The UVA lamps activate the photocatalyst on the PureAir™ Insert that captures and destroys odors and chemical vapors as they flow through the PCO.

The system reduces the toxicity of the treated air stream.

The PCO is a multi-position unit that can be installed in the return air side of all types of HVAC whole-house systems.

The unit easily adapts to upflow, downflow or horizontal unit applications.

No ozone is produced by the PCO; in fact, ozone is reduced by the PCO.

Only requires annual maintenance.

INSTALLATION CONSIDERATIONS

The PCO must be installed in the return air duct upstream of the supply air blower. Allow a 30 in. service clearance in front of the access door. The control box, pleated filter and the PureAir™ Insert must be removable.

The PCO should be installed in a horizontal position with the access panel facing to the front or rear. If the PCO must be installed in a vertical position with the access panel pointing upward and the lamps suspended vertically from the sockets, retaining clips are required to lock the lamps in the sockets. Contact the Technical Support Department for additional information.

The PCO must be connected to either a 120V or 230V power receptacle. If 230V power supply is used, an optional 230V power cord must be ordered separately. See Optional Accessories table.

Unit must be powered continuously (lamps are always on) for destruction of contaminants adsorbed on the catalyst surface and for extended lamp life.

It is recommended that the air handler be set to run continuously, except during periods of high humidity (more than 50%).

If used in conjunction with a UV germicidal light, the following must be adhered to:

- When a germicidal light is used with the PCO in direct line of sight, maintain a minimum distance of 6 ft. from the PCO.
- If duct system has a 90° bend or turn in the duct between the PCO and germicidal light, a minimum distance of 3 ft. from the PCO should be maintained.

Please refer to the Installation Instructions for additional information.

FEATURES

COMPONENTS

- ① **MERV 16 Precision Pleat™ Media Air Filter (1)**
Disposable pleated MERV 16 filter (Minimum Efficiency Reporting Value based on ASHRAE 52.2).
MERV (Minimum Efficiency Reporting Value) is a rating by ASHRAE that measures the removal of airborne contaminants.
The MERV rating of a filter describes the size of the holes in the filter that allow air to pass through. The higher the MERV rating, the smaller the holes in the filter providing enhanced filtration. The dirtier the filter, the better the filtration, however, the filters need to be replaced annually to prevent excess pressure drop and for maximum efficiency. More frequent filter changes may be required in situations with high dust or dirt loads. Particles and bioaerosols are captured on the filter.
Recommended annual replacement.
- ② **UVA Lamps (2)**
55 watt florescent, low power consumption, UVA output.
Recommended annual replacement.
Lamps are packaged separately for field installation.
- ③ **PureAir™ Insert (1)**
Titanium dioxide coated.
Coconut carbon feature disperses odors and vapors 20% faster and also absorbs 1/2 the initial concentrations.
Single piece honeycomb design.
Insert is vacuum packaged.
Recommended annual replacement.

④ CABINET

- Pre-painted steel cabinet.
Multi-position.
PCO14-23 cabinet is sized for most Lennox air handler applications.
PCO16-28 and PCO20-28 cabinets are sized for most Lennox gas furnace applications.
See dimension drawing.
- ⑤ Front panel is removable for service access.
Air flow direction may be reversed by rotating the unit top for bottom and re-positioning the front panel to the upright position.
View port on front panel for verifying UVA lamp operation.
Three-prong, detachable 6-foot power cord for plug-in to 120V electrical connection. Optional power cord for 230V operation is available and must be ordered extra.

SAFETY FEATURES

Power cord must be completely removed from the front of the unit before the cover can be removed.

MAINTENANCE SUPPLIES - ORDER SEPARATELY

Annual Maintenance Kit

A maintenance kit is available for the PCO14-23, PCO16-28 and PCO-20-28.

Each kit consists of:

- MERV 16 Precision Pleat Media Air Filter (1)
- Replacement UVA Lamps (2)
- Replacement PureAir™ Insert (1)

MERV 16 Precision Pleat™ Media Air Filter

Recommended annual replacement of the filter.

OPTIONAL ACCESSORIES - ORDER SEPARATELY

Power Cord For 230 Volt Operation

Six foot power cord with NEMA 620P male plug on one end and IEC 320 receptacle on other end allows 230 volt operation without any additional modifications.

Hardwiring Kit

For installation where local or national codes require a permanent (hard-wired) electrical connection.

Kit consists of new front access panel and connector cover. Kit replaces existing access panel and three-prong power cord.

Connection cover has 7/8 in. electrical knockouts on three sides for easy electrical connection using flexible conduit in any direction.

ETL approved.

SPECIFICATIONS

Model No.	PCO14-23	PCO16-28	PCO20-28
Nominal airflow capacity - cfm	1400	1600	2000
Pressure drop (new unit) - in. w.g.	0.28	0.30	0.32
Pressure drop (end of recommended life) - in. w.g.	0.42	0.42	0.42
Ethanol destruction rate - mg/min. (single pass rated flow destruction rate @ 500 µg/m ³ ethanol)	2.5	3	4
Number of lamps	2	2	2
